Like many computer applications, AutoCAD is able to accept input from mouse or keyboard and display information in a user interface (UI). AutoCAD also has a set of predefined command line tools that are used to interact with the software. The following AutoCAD command can be used to show the number of hidden lines and polygons in a drawing. R18 C:\TEMP\small1.dwg (Command Line) RUN R18 /HIDEPROPERTIES = C:\TEMP\small1.dwg /FOR I COUNT c:\TEMP\small1.dwg This shows the number of hidden lines and polygons. Notice the Run command on the command line of the R18 command. The command has two switches: /HIDEPROPERTIES= This switch lets AutoCAD know to hide the Properties panel of the drawing, and it has two properties: C:\TEMP\small1.dwg This specifies the file to open in the Run mode, and C:\TEMP\small1.dwg is the name of the file. /FOR I The FOR I switch tells AutoCAD to count each object that it encounters in the file. AutoCAD counts each instance of each object found in the drawing. File Contents The following command was used to create the example drawing file. R18 /TO TEMP\small.dwg The /TO switch lets AutoCAD know that you will be running commands in a template file. The R18 command runs the template in the template file. R18 /OPEN = C:\TEMP\small1.dwg The /OPEN switch lets AutoCAD know that the template file will be opened in the file that you specified, C:\TEMP\small1.dwg. The R18 command runs the template file and opens the file. The command line switches /HIDEPROPERTIES= and /FOR I can be used to run commands on many types of drawings, but they do not work with the Windows command shell. AutoCAD also has a set of predefined command line tools that are used to interact with the software. The following section describes how the

Autodesk Exchange Apps, a repository for AutoCAD plugins and extensions created by third-party developers. History AutoCAD was originally designed for use in a single company. In 1988, Autodesk released an early, restricted version of AutoCAD to many architectural firms for free. The first commercial release of AutoCAD was in 1989. In 1995, Autodesk released the first version of AutoCAD LT, which was designed for smaller firms. In 1997, Autodesk launched the Windows version of AutoCAD R13, which was designed for use with 3D CAD/CAM applications such as AutoCAD LT. In 2010 Autodesk released AutoCAD 2011 and AutoCAD LT 2011, both of which use a modified version of AutoLISP. AutoCAD LT 2011 also includes full features of AutoCAD 2011, in addition to improved user experience and several bug fixes. On January 1, 2011, Autodesk announced AutoCAD 2011 for Mac was available. Starting in 2011, Autodesk released regular updates for AutoCAD and AutoCAD LT, and also announced a new version of AutoCAD named AutoCAD 2014, which included a cloud-based user experience, and supports concurrent editing of drawings. Beginning in the fall of 2016, Autodesk released a major update to AutoCAD, the first update since the 2011 version. In late 2017, Autodesk introduced a new pricing model for AutoCAD and AutoCAD LT. Previously, Autodesk offered two editions of AutoCAD: a single-user model ca3bfb1094

Next, run the auto.exe and choose your license key. Paste the license key into the generated C:\autocad\licensekey file. After the changes are saved, double-click the script to start the service. Autocad for Mac is not yet available. Q: Async Task in background I know this is a common problem, but I couldnt find an answer to this problem. I have a very simple async task (below) public class Tasks extends AsyncTask { @Override protected String doInBackground(String... params) { //some stuffs return result; } @Override protected void onPostExecute(String result) { super.onPostExecute(result); Log.d("async task", "result : " + result); //some stuffs } } I set this async task in an activity's onCreate method protected void onCreate(Bundle savedInstanceState) { Log.d("async task", "on create"); Tasks task = new Tasks(); Log.d("async task", "async task created"); task.execute(); } So now, I expected that onCreate method will be run before onPostExecute method. but the problem is that onCreate method gets called before onPostExecute. I read a lot of posts about this problem, but I didnt find an answer. Thanks in advance. A: I read a lot of posts about this problem, but I didnt find an answer What you are doing is a bad design. I expect that onCreate will be called before onPostExecute No, it is not. You may think so but the onCreate method will be called after the doInBackground method finishes and that is the whole point of AsyncTask.
