A basic representation of a mainframe, such as that of the AutoCAD family, is known as an AutoLISP program or script. The AutoLISP language evolved from PL/1, and it remains one of the most popular programming languages for software development. AutoLISP uses the same basic control structure of commands called functions which provide the ability to program in a style like other languages. AutoCAD maintains a list of AutoLISP functions on its website. This function list provides a good starting point for any AutoLISP users. A simple example of an AutoLISP program is as follows: (defun my-plot () (label (plot-line (1 1) (3 3) (0 1) (4 4))) (draw-circle (3 3) (4 4) 2)) (my-plot) The function list is extensive, and can be used as a comprehensive reference to assist users with the many features of AutoCAD. It is also possible to directly access the AutoLISP function list and navigate it from within AutoCAD. AutoCAD also supports a number of Visual LISP scripts, which are most useful for automated creation and manipulation of AutoCAD objects. For example, it is possible to create a script that automatically draws multiple copies of a series of lines, and create a loop to repeat this operation indefinitely. Visual LISP scripts are designed to be flexible and easy to read and debug. AutoCAD offers a scripting language called VBA, which is a Microsoft Windows scripting language. VBA is supported on Windows 2000, XP, Vista, Windows 7 and Windows 8. AutoCAD 2011 and later supports 32-bit VBA on the Windows 32-bit platform, and 64-bit VBA on the Windows 64-bit platform. VBA is not available for Mac OS or Linux. AutoCAD also supports the .NET scripting engine, which is a .NET language designed for automation. It was designed to write programs that run on multiple platforms, including Windows, Linux and Mac OS X. AutoCAD 2014 and later supports the .NET platform, and is the first AutoCAD release that does. .NET scripts are designed to be more dynamic and flexible than their Visual LISP and VBA counterparts.
