Storico Q: How to add i18n without a i18n plugin in Rails 3? I've just started learning Rails and I'm stuck on how to add i18n for my app. I don't know where the i18n folder should be, I have i18n.ru.yml under config, but I don't know what file contains the translations, only the menu and legal strings. The default example in Rails 3 has both config.i18n.load_path += Dir[Rails.root.join("my", "locales", "*.yml").to_s] and i18n.t helper, but it doesn't work. A: Sorted. I installed mylocale-i18n. Install readme says: 4.3.2 Create i18n/ folder The public/i18n folder should be created. Just modify public/i18n/app/controller/application_controller.rb: module ApplicationController def i18n_locale i18n.locale = params[:locale] if params[:locale] yield ensure i18n.locale = i18n.default_locale end end Open a terminal and run rails g i18n_locale #ifndef SRC_LIB_BACKGROUND_INPUT_H_ #define SRC_LIB_BACKGROUND_INPUT_H_ #include "envoy/type/percent.h" #include "extensions/common/input/input.h" #include "google/protobuf/repeated_field.h" namespace Envoy { namespace BackgroundInput { /** * Interface defining background input handler. */ class BackgroundInput : public Input, public Allocator { 6d1f23a050
